

The CS Time Importing utility is a dynamic tool that is used to assist with the importing of clockings and employee information from ASCII text files that are created by other clocking and employee management systems.

These data files can be manually imported or a device can be created to import newly created files automatically.

- [Automatic Importing of Data](#)
- [Clockings](#)
- [Customers](#)
- [Daily Shift Rosters](#)
- [Employees](#)
- [Hierarchy](#)
- [Jobs](#)
- [Leave](#)
- [Leave Balances](#)
- [Payroll Shift History](#)
- [Terminations](#)

An example file with the current generic import formats is available under Files on the bottom of this page.
