

From time to time a new version of TNA will be available and you will have to upgrade your copy to make use of any new features or if your TNA is not compatible with your new version of Windows.

Unlike service releases, version upgrades are not free and you would have to contact your [TNA dealer](#) to buy a license for the new version.

New TNA versions can be [downloaded](#) from the TNA website.

Before you start the upgrade, please make sure you have the following ready:

1. A license code for the new version.
2. The install file(s) of the new version.
3. A backup of your current data.

If you experience any problems during the upgrade process, please contact your TNA dealer.
