

There are currently three different installs available for CS Time:

1. The TopSpeed version which is one most commonly used.
2. The Microsoft SQL Server version.
3. The Unified edition which is used for smaller companies. This edition will only collect clockings and process hours when CS Time is open unlike the above two version which uses the CS Time Server to collect clockings and process hours almost in real time.

Once you have selected the version best suited for your purposes, the following documents will assist with installing CS Time:

[Installing CS Time SQL](#)

[Installing CS Time TopSpeed](#)

After installing CS Time use the document in the [Quick Start](#) section to get the system up and running as quickly as possible.
